WELDED BODY

The welded body allows the use of extensions, ensures high load-bearing capacity of the drawers and allows the furniture to be anchored to the wall. No screws or twists - everything welded together.

POSSIBILITY OF INSTALLING AN EXTENSION

The extension saves space in the room. That's more space on the same surface. The installation of a heavy extension is possible thanks to the welded, durable construction of the cabinet.

MOUNTING HOLES

The cabinet carries heavy loads, therefore, for safety reasons, it is recommended to anchor the furniture to the wall using the serially prepared mounting holes.

LOCK WITH TWO KEYS

The locks used in SZK cabinets are safe and come with 2 keys. All drawers in the cabinet are closed with a central lock. SZK cabinets meet GDPR requirements.

DURABLE GUIDES

The guides used provide each drawer with a load capacity of up to 50 kilograms. The ability to fill the cabinets with heavy documents makes them multi-purpose drawer cabinets.

SELF-ADHESIVE CARD

Each drawer is equipped with a self-adhesive business card holder, which makes it easier to describe the contents of the drawer and keep the files in order.

LEVELING FEET

Feet adjustable within 10 mm allow you to level the furniture and isolate the cabinet body from the ground, thus additionally preventing corrosion.

AVAILABLE FORMATS

The cabinets are available for many formats: A3, A4, A5, A6, B5 and a set of small formats.
